Question 1

Not answered

Marked out of 10.00

v1 (latest)

Describe ethics, morality and computer ethics.

No	Aspect	Description
1	Morality	Shared social conventions about right and wrong that is the basis for an established consensus
2	Computer Ethics	Moral guidelines that govern the use of computer and Information Systems
3	Ethics	Set of beliefs about right and wrong behavior within a society. Moral beliefs about right and wrong.

Question 2

Not answered

Marked out of 10.00

v1 (latest)

Contrast Bribes and Gifts.

No	Aspect	Description
1	Bribes	Made in secret. Involve offering something valuable to gain undue influence or an unfair advantage. Bribes are unethical and often illegal. Normally involves 3rd party.
2	Gifts	Made openly. Directly from giver to receiver. Without expectation or future favor.

Question 3

Not answered

Marked out of 10.00

v1 (latest)

Provide 3 examples of bad ethics.

No	Aspect	Description
1	Conflict of Interest	An employee starting a part-time business that offers similar services to their employer
2	Insider trading	If a CEO sells shares after learning of an impending financial loss before that information is made public
3	Deceptive advertising	Volkswagen's "Clean Diesel" advertising campaign
4	Software piracy	Unauthorized copying or use of software, violating copyright laws.

5	Plagiarism	Presenting someone else's work as your own without proper credit.
6	Confidentiality breach	Disclosing private or sensitive information without permission

Question 4

Not answered

Marked out of 10.00

v1 (latest)

Define ethical issues.

Ethical issues involve situations where there are conflicts between moral principles, often requiring careful decision-making.

Question 5

Not answered

Marked out of 10.00

v1 (latest)

Explain digital security risks and types of malwares.

Digital Security Risks

- **Definition:** Events that can damage or result in the loss of hardware, software, data, or information.

Types of Malwares

- **Viruses:** Programs that attach to files and spread to other systems, potentially damaging data.
- **Worms:** Self-replicating programs that consume system resources and may crash systems.
- **Trojans:** Disguised as legitimate software but perform harmful tasks once activated.
- **Payload:** The destructive event triggered by malware.

Macro Viruses: Embedded in applications like word processors and spreadsheets, often executed unknowingly

Question 6

Not answered

Marked out of 10.00

v1 (latest)

Describe the types of Internet and network attacks and explain ways to safeguard against these attacks.

Types of Attacks

1. **Malware:** Malicious programs written with bad intention.
2. **Botnets and Zombies:** Groups of compromised devices used for malicious purposes.
3. **Denial of Service (DoS):** Overwhelms systems, causing service disruptions.
4. **Distributed DoS (DDoS):** Large-scale attacks using multiple devices to target multiple systems.
5. **Backdoors:** Programs bypassing security controls for unauthorized access

How to safeguard against internet and network attacks

1. **Use Antivirus Software:** Detects and removes viruses, worms, and Trojans.
2. **Employ Firewalls:** Blocks unauthorized access to systems.

3. **Educate Users:** Avoid suspicious emails and attachments.
4. **Install Updates:** Regularly update systems to patch vulnerabilities

Question 7

Not answered

Marked out of 10.00

v1 (latest)

Describe the types of Internet and network attacks and explain ways to safeguard against these attacks.

Types of Attacks

1. **Malware:** Malicious programs written with bad intention.
2. **Botnets and Zombies:** Groups of compromised devices used for malicious purposes.
3. **Denial of Service (DoS):** Overwhelms systems, causing service disruptions.
4. **Distributed DoS (DDoS):** Large-scale attacks using multiple devices to target multiple systems.
5. **Backdoors:** Programs bypassing security controls for unauthorized access

How to safeguard against internet and network attacks

1. **Use Antivirus Software:** Detects and removes viruses, worms, and Trojans.
2. **Employ Firewalls:** Blocks unauthorized access to systems.

3. **Educate Users:** Avoid suspicious emails and attachments.
4. **Install Updates:** Regularly update systems to patch vulnerabilities

Question 8

Not answered

Marked out of 1.00

v1 (latest)

Which of the following can help improve digital privacy when using public Wi-Fi?

Select one:

- ☐ A. Antivirus software
- ☐ B. Accessing only secured websites
- ☐ C. Using a VPN
- ☐ D. Using personal hotspot

The correct answer is: Using a VPN

Question 9

Not answered

Marked out of 1.00

v1 (latest)

What happens when a digital certificate expires?

Select one:

- ☐ A. The certificate is automatically renewed
- ☐ B. The certificate becomes invalid, and communication is no longer secure
- ☐ C. The private key is reset
- ☐ D. The certificate becomes invalid, and the website is no longer accessible

The correct answer is: The certificate becomes invalid, and communication is no longer secure

Question 10

Not answered

Marked out of 1.00

v1 (latest)

Which of the following is a major benefit of digital currencies?

Select one:

- ☐ A. Faster and cheaper transactions
- ☐ B. Complete anonymity in all transactions
- ☐ C. No need for an internet connection
- ☐ D. Unlimited supply

The correct answer is: Faster and cheaper transactions

Question 11

Not answered

Marked out of 1.00

v1 (latest)

John, an IT administrator, discovers a vulnerability in his company's network. He uses the weakness to gain unauthorized access to sensitive files for personal gain. What unethical practice is John engaging in?

Select one:

- ☐ A. Ethical Hacking
- ☐ B. Social Engineering
- ☐ C. Insider Threat
- ☐ D. Software Piracy

The correct answer is: Insider Threat

Question 12

Not answered

Marked out of 1.00

v1 (latest)

What feature allows digital currencies to eliminate the need for intermediaries in financial transactions?

Select one:

- ☐ A. Decentralized ledger systems
- ☐ B. Direct Customer-to-Customer (C2C) transactions
- ☐ C. Government subsidies
- ☐ D. Use of crypto mining

The correct answer is: Decentralized ledger systems

Question 13

Not answered

Marked out of 1.00

v1 (latest)

A software developer intentionally adds a backdoor to a software application so he can access user data without their knowledge. This an example of _____

Select one:

- ☐ A. Malware Development
- ☐ B. Unethical Programming
- ☐ C. Algorithmic Transparency
- ☐ D. Software Exploitation

The correct answer is: Malware Development

Question 14

Not answered

Marked out of 1.00

v1 (latest)

A company collects user data from a mobile app but does not disclose how the data will be used or stored. What ethical issue does this raise?

Select one:

- ☐ A. Algorithm Bias
- ☐ B. Lack of Data Privacy
- ☐ C. Software Licensing Violation
- ☐ D. Open-Source Misuse

The correct answer is: Lack of Data Privacy

Question 15

Not answered

Marked out of 1.00

v1 (latest)

A machine-learning algorithm used to screen job applications disproportionately rejects candidates from a specific demographic due to biased training data. What ethical concern does this scenario highlight?

Select one:

- ☐ A. Plagiarism in AI
- ☐ B. Algorithmic Bias
- ☐ C. Data Encryption Bias
- ☐ D. Data Training Error

The correct answer is: Algorithmic Bias

Question 16

Not answered

Marked out of 1.00

v1 (latest)

A company generates a digital signature for a sensitive financial transaction. The digital signature ensures:

Select one:

- ☐ A. Only authorized parties can view the transaction
- ☐ B. The transaction details are encrypted
- ☐ C. The transaction details are not modified during transfer
- ☐ D. The transaction is committed without prejudice

The correct answer is: The transaction details are not modified during transfer

Question 17

Not answered

Marked out of 1.00

v1 (latest)

Which regulation is specifically designed to protect the digital privacy of European citizens?

Select one:

- ☐ A. GDPR
- ☐ B. PDPA 2010
- ☐ C. DMCA
- ☐ D. CCPA

The correct answer is: GDPR

Question 18

Not answered

Marked out of 1.00

v1 (latest)

A company receives a document with a valid digital signature but later discovers the sender's private key was compromised. What ethical or security issue does this highlight?

Select one:

- ☐ A. Lack of encryption standards
- ☐ B. Inadequate key management practices
- ☐ C. Outdated digital signature algorithms
- ☐ D. Unnecessary use of digital signatures

The correct answer is: Inadequate key management practices

Question 19

Not answered

Marked out of 1.00

v1 (latest)

Which of the following is NOT an ethical concern related to AI?

Select one:

- ☐ A. Data privacy
- ☐ B. AI replacing human jobs
- ☐ C. Maintaining strong wireless signals
- ☐ D. Algorithmic transparency

The correct answer is: Maintaining strong wireless signals

Question 20

Not answered

Marked out of 1.00

v1 (latest)

What is the CIA triad in cybersecurity?

Select one:

- ☐ A. Confidentiality, Integrity, Availability
- ☐ B. Communication, Internet, Accessibility
- ☐ C. Cybersecurity, Internet, Accessibility
- ☐ D. Confidentiality, Identity, Authority

The correct answer is: Confidentiality, Integrity, Availability

Question 21

Not answered

Marked out of 1.00

v1 (latest)

Which of the following is NOT a concern of computer ethics?

Select one:

- ☐ A. Intellectual property
- ☐ B. Digital privacy
- ☐ C. Applying latest software updates
- ☐ D. Unauthorized access

The correct answer is: Applying latest software updates

Question 22

Not answered

Marked out of 1.00

v1 (latest)

What is the ethical concern regarding artificial intelligence (AI) in the workplace?

Select one:

- ☐ A. AI automating repetitive tasks
- ☐ B. AI replacing human workers and creating unemployment
- ☐ C. AI improving data accuracy
- ☐ D. AI reducing processing times

The correct answer is: AI replacing human workers and creating unemployment

Question 23

Not answered

Marked out of 1.00

v1 (latest)

Which organization typically issues a digital certificate?

Select one:

- ☐ A. Domain Name Server (DNS)
- ☐ B. Certificate Authority (CA)
- ☐ C. Internet Service Provider (ISP)
- ☐ D. Data Encryption Agency (DEA)

The correct answer is: Certificate Authority (CA)
