## 1. How to install Python IDE?

Before, starting with the process of Installing Python IDE PyCharm in Windows, one must ensure that Python is installed on their system. To check if the system is equipped with Python, go to the Command line (search for cmd in the Run dialog ( window button + R ) ).

Now run the following command on cmd:

```
python --version
```

If Python is already installed, it will generate a message with the Python version available.

```
C:\Windows\system32\cmd.exe

C:\Users\Abhinav Singh>python --version
Python 3.8.1

C:\Users\Abhinav Singh>
```

- If Python is not present, go through “**2. How to Install Python in Windows?**” and follow the instructions provided.
- Otherwise, jump to “**3. How to install Python Pycharm on Windows?**” and follow the instructions provided.

## 2. How to Install Python in Windows?

### Step 1: Select Version to Install Python

Visit the official page for Python <https://www.python.org/downloads/> on the Windows operating system. Locate a reliable version of Python 3, preferably version 3.13.7, which was used in testing this tutorial. Choose the correct link for your device from the options provided: either **Windows installer (64-bit)** or **Windows installer (32-bit)** and proceed to download the executable file.

Python Homepage

### Step 2: Downloading the Python Installer

Once you have downloaded the installer, open the .exe file, such as **python-3.13.17-amd64.exe**, by double-clicking it to launch the Python installer. Choose the option to Install the launcher for all users by checking the corresponding checkbox, so that all users of the computer can access the Python launcher application. Enable users to run Python from the command line by checking the Add python.exe to PATH checkbox.

**Python Installer**

After Clicking the **Install Now Button** the setup will start installing Python on your Windows system. You will see a window like this.

**Python Setup**

### Step 3: Running the Executable Installer

After completing the setup, Python will be installed on your Windows system. You will see a successful message.

### Python Successfully installed

### Step 4: Verify the Python Installation in Windows

Close the window after successful installation of Python. You can check if the installation of Python was successful by using either the command line or the **Integrated Development Environment (IDLE)**, which you may have installed. To access the command line, click on the Start menu and type "cmd" in the search bar. Then click on Command Prompt.

```
python --version
```

```
C:\Users\ashub>python --version
Python 3.10.11
```

### Python version

You can also check the version of Python by opening the IDLE application. Go to Start and enter IDLE in the search bar and then click the [IDLE](#) app, for example, **IDLE (Python 3.13.7 64-bit)**. If you can see the Python IDLE window then you are successfully able to download and installed Python on Windows.

**Python IDLE**

### 3. How to Install Python Pycharm in Windows?

**Step 1:** Go to website official website of JetBrains

<https://www.jetbrains.com/pycharm/download/>

and click on the "**DOWNLOAD**" link of the Community section.

**Step 2:** After clicking on Download Click on Next

**Step 3:** After Click on Next , You need to choose the destination folder according to your choice.

**Step 4:** Choose options of installation according to your choice.

**Step 5:** Choose JetBrains and Click on "Install".

**Step 6:** Let the installation finished.

**Step 7:** After Installation completed, It will show that PyCharm is installed successfully , then click on "I want to manually reboot later". Click on Finish and then the process is completed.

## 4. Getting Started with PyCharm

Once the Installation is over, PyCharm can be searched and started from the Start Menu. Follow the steps given below to do the same:

- **Searching from Start Menu:**

- **Getting done with License Agreement:**

- **Setting UI Theme:**

- **Get Started with PyCharm:**
